Thanks!

First of all, thank you for purchasing our pack. We really appreciate that! We are putting a lot of effort into this.

We are also planning to expand the list of creatures and their animations in the future with free updates of the pack. Check out our **Discord** for any news.

FAQ

1. **Does your pack work in Unity URP?**
   All of our packs are made with Unity Standart Shaders, so it's pretty easy to convert them to the URP. Check this **tutorial**

We also stored all materials and global volume profiles in the **URP_LowPolyAnimatedFantasyCreatures.unitypackage**. You can fix the materials by unpacking them.

2. **Can I use your assets with a different engine?**
   Yes, but we will not be able to support you.

3. **Can I use your assets commercially?**
   Yes, as long as they are safely stored within your product and you are not reselling or redistributing them. Please carefully read this: **EULA and Terms of Service**

4. **Can I use the Demo Scene with the New Unity Input Setting?**

   Yes

5. **Can I use humanoid creatures with the Unity humanoid rig?**
   Yes

https://youtu.be/yZSd1qbdY-Y?si=WRlq0KiVzBtAjx8x

Step 1: Select all the skeleton .fbx models that use the generic rig and switch it to Humanoid via the inspector
Step 2: Open another project window and go to the prefabs folder
Step 3: Select all the skeleton prefabs and activate the Apply Root Motion checkbox
Step 4: Attach humanoid avatars that were generated in skeleton models to the animation controllers of the corresponding skeleton prefabs

6. **Can I use and edit the assets in Blender outside Unity? How?**

   Yes, if License requirements are met. Using animals should be easy, but adding or editing animations is hard.

   When we export an armature with .fbx, the only information exported are the deform bones. No controllers are included in .fbx. The bones we see when importing the model back into Blender are just joints; they won't look as good as they do in our Blender/Maya projects. The only thing we can suggest to make stuff easier is to scale the bones: **https://youtu.be/OTKr0eQ1Ffs**

   However, if you have tips for new animations, please let us know on our Discord, and we will add them to the list.
